

Netflix Content Analysis Report

1. Introduction

Objective

This report analyzes Netflix's content trends using Power BI. The key focus areas include:

- The distribution of movies and TV shows
- The most popular genres
- The release year trends
- Country-wise content distribution
- Rating and duration insights

Data Source

The dataset used is "Netflix Movies and TV Shows" from Kaggle. It includes information on titles, genres, release years, ratings, and countries.

Tools Used

- **Power BI** for data visualization and analysis
- **Power Query** for data transformation and cleaning

2. Data Preparation

Data Cleaning Process

- Removed duplicate records and missing values
- Split the "Genre" column to extract individual genres
- Standardized country names for consistency
- Ensured the dataset contained relevant attributes for analysis

Key Metrics Considered

- Total number of movies and TV shows
- Distribution of content across different genres
- Trend of content release over the years

- Country-wise production trends
- Duration and rating distribution

3. Key Findings and Insights

1. Movies vs. TV Shows

- Movies make up **69.62%** of Netflix content, while TV Shows account for **30.38%**.
- This indicates that Netflix prioritizes movie content over TV series.

2. Genre Popularity

Top 5 Most Popular Movie Genres

- Drama
- Documentaries
- Stand-up Comedy
- Comedies
- International Dramas

Top 5 Most Popular TV Show Genres

- TV Mysteries
- TV Sci-Fi
- TV Horror
- TV Thrillers
- TV Shows (General Category)

3. Release Year Trends

- Netflix content **skyrocketed post-2010**, indicating rapid growth in original content production.
- The peak content addition was observed around **2018-2019**.

4. Country-wise Content Distribution

- The **United States** leads in content production, followed by the **United Kingdom and India**.
- Emerging content production is seen in **Vietnam, Venezuela, and Uruguay**.

5. Duration & Ratings Analysis

- Most TV shows have **only one season**, suggesting Netflix focuses on **limited-series formats**.
- The most common duration for movies is **90-100 minutes**.

4. Recommendations for Netflix

✓ **Expand into new genres like Sci-Fi and Thriller**, as they show increasing popularity. ✓ **Increase content production in non-English-speaking countries** to attract global audiences. ✓ **Balance between quantity and quality**—ensuring high-rated content while maintaining content volume. ✓ **Focus on multi-season TV shows**, as audiences may prefer long-term engagement.

6. Conclusion

Netflix has a diverse content portfolio, with a **strong focus on movies over TV shows**. Drama and Comedy are the most popular genres, and content production has grown significantly over the past decade. By optimizing its content strategy based on these insights, Netflix can enhance user engagement and expand its market reach.
